Professor Vipin Gupta

23 Feb 2021: Professor Vipin Gupta's metaphysics digs deep into Mother Nature

In just three published successive books, *What Is Divine Energy*, *What Is Present Reality*, and *Is Present Reality*, Dr. Vipin Gupta challenges the view that the Eastern wisdom developed over thousands of years before the advent of the modern era has little scientific value.

[Dr. Vipin Gupta](#) is a professor of sensible management and appropriate science at the [California State University San](#)

Bernardino.

Fact: Professor Gupta's view regarding the scientific nature of Eastern wisdom

In an interview, Professor Gupta noted, "Even if the present reality is one where everybody believes that Eastern cultural wisdom has little scientific value, once people become free of the bounds on their rationality inherited from past, the future reality need not be the same."

Work: Gupta known for his work on culture, leadership, strategic development

Dr. Gupta also has a PhD in managerial science and applied economics from the Wharton School of the University of Pennsylvania.

He is known for his work on culture, leadership, and strategic management.

His latest works named the *Vastly Integrated Processes Inside Nature series*, are an in-depth investigation into the hidden dimension of Mother Nature.

First book: First book of the series investigates cell as life unit

In the first book of the series, *What Is Divine Energy*, Dr. Gupta investigates the cell as a unit of life. He breaks the cell's development into 33 phases, in symmetry with 33 categories of deities identified in ancient Indian literature.

He systematically explains each phase, showing how during the first eight phases, a cell produces 36 Eukaryotic

initiation factors.

Groups: 36 Eukaryotic factors initiate natural growth of 36 entity groups

These 36 initiate the natural growth of the 36 groups of entities, in symmetry with the 36 heavens of Taoism.

The 36 entity groups are formed through paired interaction of six entities: phage, archaeon, bacterium, eukaryote, prokaryote, and the cell itself.

These form 30 species groups, of which six constitute the primordial animals, 12 constitute the zodiac animals, and 12 constitute the astrological animals.

Fact: Gupta's research shows how first 10 phases empower a cell

Professor Gupta's research shows how the first 10 phases empower a cell to localize the convergent energy of the entire cosmos for profitable growth, which empowers it to enjoy oneness with the dynamic cosmic transformations and to trade them for potentiating supernatural development.

Mother Nature: Cell can produce six cells through oneness with Mother Nature

Through oneness with Mother Nature, a cell enjoys the power to produce six cells, by conceiving itself as a paternal, Mother Nature as a maternal, and differentiating itself into an octave of cells.

Excluding the cells that constitute the primordial paternal, after the cell potentiates its octave potential, and the illusionary primordial maternal, it results in a six-fold growth.

Fact: Divya, a synonym of Kala and Bhava: Dr. Gupta

In an interview at [Criticspace Journals](#), Dr. Gupta notes, "That's why the six-letter divine element (Divya), was considered a synonym of the time element (Kala) and the mood element (Bhava) in ancient India. All these include the entire 360 degrees' energy of the universe."

Second book: 'What is Present Reality,' Dr. Gupta's second book

In his second book, [What is Present Reality](#), Dr. Gupta investigates the metaphysics of the special theory of linear relativity, the general theory of nonlinear relativity, and parabolic theory of chaotic relativity.

He meticulously shows how varying theoretical approaches to relativity are bound to becoming one's special immanent divinity (first 10 phases), general transcendental divinity (second 10 phases), and parabolic infinite divinity (third 10 phases).

Third book: 'Is Present Reality,' Dr. Gupta's third book

In his third book, [Is Present Reality](#), Professor Gupta dives deeper into the dynamics of taking space as an ideal with immanent divinity (first 10 phases).

He dives deeper into the dynamics of making time as an ideal for trading emanating, transcendental divinity (second

10 phases); shaping the causation as an ideal for servicing the self as an infinite, primeval divinity (third 10 phases).

Fact: Book dives deeper into the dynamics of entity

In his third book, Dr. Gupta dives deeper into the dynamics of exchanging one's entity with an idealized para entity to be a primordial deity homolog of the Mother Nature (last three phases, manifesting a natural, devoted circular divinity as the goal of one's life).

Availability: All three books available worldwide in hardcover, paperback, e-book formats

The books are a revolutionary effort by Dr. Gupta to make the current generation realize about the potential which we are carrying within us and divine methods of using our potential.

All three books are 550 pages and are available worldwide in hardcover, paperback, and e-book formats.

They are also available on Amazon in a shorter, nutshell edition, with paperback and Kindle unlimited formats.
